

Campus Commons, Saint Joseph's University

This multi-functional Venue was developed and designed to accommodate various activities within the Campus Commons. From registration and student parent activities, to wide screen hi-definition movies and various entertainment events this renovated facility, previously a chapel, has become a focal and gathering place on the SJU Maguire campus.

The technology includes as its main media focus a retractable 16'x 9' foot screen on which a front firing projection system produces an incredible high definition image. Along the two wings and rear are the buffer walls with 60" LED monitors. These areas can be used as separate presentation areas or tied into the main display's distribution system.

HDMI, DVI, Component, and other analog and digital sources are available at the buffer wall and front presentation areas. All LED monitors are tied into the campus signage and information network.

To complete and enhance the experience a specialized program audio system was built within the front wall and coordinate with the architecture. This bi-amplified system utilized Community Pro speakers and individual sub-woofers. A separate bi-amplified full range voice reinforcement system was also designed for crystal clear and intelligible speech reproduction. The system also features a combination of wired and wireless microphones.
